# **Real Time Hand Based Robot Control** Using MultiCam

# Introduction

We propose an efficient and natural hand based commanding system to control an industrial robot using multimodal 2D/3D images.

## Main Functionalities:

- Move the robot in any direction by moving the hand
- Pick up and put down an object with palm/fist or fist/palm posture

### Main Advantages:

- Independent of environment lighting
- Fast, intutive and natural interface
- Robust against cluttered background
- High accurate

**Robot Control** 

**Graphical User Interface** 

# Hand Detection & Posture Classification Techniques

3D Images (64x48 Pixels)

2D Images (640x480 Pixels)

Post-Processing

Test:

**GRK-1564** 

Imaging

**New Modalities** 

# Training:

Positive samples: 1037 images Negative samples: 1269 images Search window size: 32x32 pixels Number of cascade stages: 20

### **Actual Class**

### Correctly detected images (true positive)

# False Positive Rate: 0.032

### Wrongly detected images First row: missed, Second row: misclassified

Hit Rate: 0.921 Accuracy: 94.4% Detection Speed: video frame rate
